

Attrition Case Study

Attrition Dataset Introduction

By: Lindsay Gills

The factors in the attrition dataset were age, attrition, business travel, daily rate, department, distance from home, education, education field, employee count, employee number, environment satisfaction, gender, hourly rate, job involvement, job level, job role, job satisfaction, marital status, monthly income, number of companies worked, overtime, percent salary hike, years since last promotion, performance ranking, relationship satisfaction, standard hours, stock option level, total working years, training times last year, work life balance, years at company, years in current role, and years with current manager. The main variables used in the attrition dataset were job involvement, attrition, monthly income, and overtime. Job involvement was a categorical variable with a score of 1 being low to 4 being very high. The categorical variable attrition indicated whether the employee left the company (yes) or not (no). The numerical variable monthly income was the employee's monthly salary. The categorical variable overtime, indicated whether the employee worked overtime (yes) or not (no).
